

## DRIVE-IN/DRIVE-THROUGH RACK

Maximize the warehouse cube while keeping aisle space and budgets tight.

Maximize warehouse space and store large numbers of pallets of similar items at lower cost. Robust, SKU-specific designs optimize available space and minimize the required number of access aisles.

Ideal for high-volume, low-SKU operations, Drive-In systems provide last-in, first-out access, and Drive-Through configurations support first-in, first-out inventory management.

### FEATURES AND OPTIONS

- Fabrication: Roll-formed or structural channel steel
- Single or double entry design
- Up to 10 pallets deep
- Arms are tapered structural angle for clearance and strength
- Entry frames can be enhanced with offset or kant-back style bases
- Floor-mount guide angle or rack mounted rub rails for in-bay protection and vehicle guidance
- Load rails
  - » Structural angle rail sizes: 3/16" or 3/4"
  - » Column sections: 14 ga or 13 ga
  - » Top-mounted to arms
- Top ties included for heavier duty systems
- Rail support beams included for rear position of all drive-in systems
- Horizontal and vertical X-bracing supplied as needed per design requirements and local codes
- Hardware included for simple installation

# Why Choose SpaceRAK?

No matter what quantity, type, size, shape or diversity of SKUs you need to store and move, SpaceRAK has the answer. What's more, we assure:

- Versatility—Extensive design and material options fit every type of application and facility.
- Exceptional Quality—SpaceRAK designs adhere to Rack Manufacturers Institute standards.
- Time and Cost Efficiency—Responsive sales and support teams, multiple shipping facilities, and quick-ship availability for common products translate into significant savings.
- Compliance Support—Your system can be designed to meet IBC, OSHA and all other codes and standards.
- A Positive Experience—Your satisfaction is our primary responsibility.
