

# PUSH-BACK RACK

**Increase storage space and employee productivity.**

Combining the SpaceRAK Push-Back rack framework with OEM carts and rails provides the ideal mix of compactness and product accessibility, ensuring maximum storage capacity, exceptional selectivity and improved throughput.

Pallets are loaded and placed on rolling carts that are pushed back as more are added. Gravity brings the next available pallet forward for unloading, keeping the pick face replenished so there's no need to reach or drive into the rack.

## FEATURES AND OPTIONS

- Fabrication: Roll-formed or structural channel frames and beams, or a combination
- Variable bay widths: Single- or double-wide pallet rows
- Configuration: Nesting carts store pallets two to six deep; Up to four pallets high; Minimizes required access aisles
- Cart assemblies designed for superior space utilization, strength and durability
- Can be designed to meet any applicable standards and codes
- Hardware included for simple installation of the racks, carts and rails

# Why Choose SpaceRAK?

No matter what quantity, type, size, shape or diversity of SKUs you need to store and move, SpaceRAK has the answer. What's more, we assure:

- Versatility—Extensive design and material options fit every type of application and facility.
- Exceptional Quality—SpaceRAK designs adhere to Rack Manufacturers Institute standards.
- Time and Cost Efficiency—Responsive sales and support teams, multiple shipping facilities, and quick-ship availability for common products translate into significant savings.
- Compliance Support—Your system can be designed to meet IBC, OSHA and all other codes and standards.
- A Positive Experience—Your satisfaction is our primary responsibility.
